

ALL-ELECTRIC IMPACT TOOLS

for High-Speed, Economical Production

STAKE • MARK • CUT OFF • EYELET • SWAGE • RIVET • CRIMP • BEND • BLANK • FORM

SOLENOID-OPERATED

Black & Webster solenoid-operated tools are designed to perform a wide variety of production operations. They deliver lightning-fast, controlled blows — speeding up many operations where impact is required. They are ideal for staking, riveting, marking, steel stamping and many other jobs where speed and economy are essential.

The Electropunch, Electrostake and Electropress are extremely versatile units, adaptable to many applications. Because of its speed, the Electropunch is ideal wherever a blow is required. The Electrostake presses parts together before delivering a blow, thus assuring true alignment. The Electropress delivers impact and then applies pressure after the blow.

Black & Webster tools have wide ranges of speed and power. They can attain operating rates as high as 10,000 pieces per hour with automatic switching and rates as high as 5,000 pieces per hour in hand-loaded operations. They deliver impacts ranging from a few ounces up to 5 tons. Standard accessories are used to provide added control of impact, speed and safety.

All Black & Webster tools are ruggedly built — made to give long, dependable service. All units are portable; simply plug into any 115 V., AC outlet. Complete units start at \$65.50.

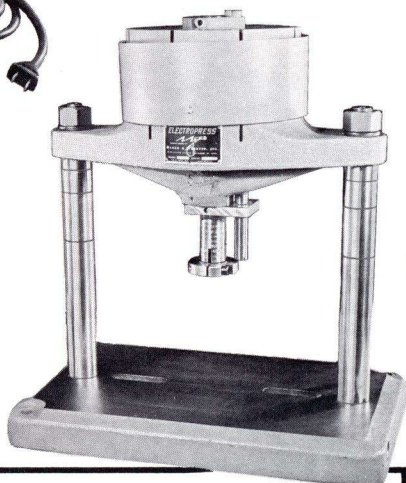

Write for illustrated catalog

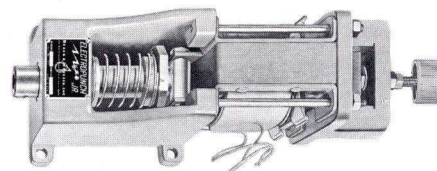

ELECTROPUNCH
Universal, Lightning-Fast
Impact Tool

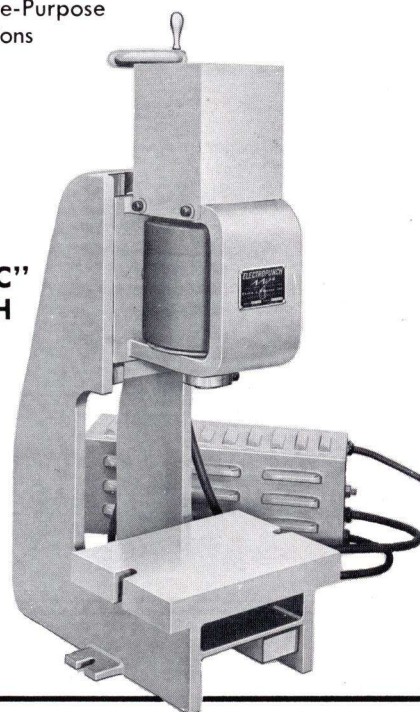

ELECTROSTAKE
For Fast, Safe Staking

**MODEL "C"
ELECTROPUNCH**
For Impacts Up
To Five Tons
